

## ISO 8124 Toys Testing Equipment Toy Lids Durability Tester

### Application

This instrument is used to detect the durability test of the toy case cover.

Use method and judgment:

One end of the reciprocating structure of the instrument is connected to the side of the lid remote from the side of the hinge, and the cover is opened and closed by the reciprocating motion of the mechanism until the number of tests reaches the set value. To determine whether the cover and cover support device meet the relevant requirements.

### Standards

16 CFR 1500, ASTM F963 4.8, EN-71, ISO 8124.

## Technical Parameters

Power supply	220V, 3A
Number of samples	one / time
Test time per cycle (closed, open)	15 seconds
Number of tests	7000 times
Counter	LCD liquid crystal display 0 ~ 999999 times can be set
Air supply	5kgf / cm <sup>2</sup>
Volume (WxDxH)	880 * 820 * 1120mm
Weight	about 65kg
